

MACTON[®] INDUSTRIAL PRODUCTS

MANUFACTURING, MATERIAL HANDLING & TESTING EQUIPMENT

PERFORMANCE THROUGH INGENUITY

For over six decades, Macton has specialized in engineering, fabricating and installing systems to move and position large discrete objects — from 140-foot diameter turntables and 75 ton lifts, to 95-ton people movers and 55-ton transporters. Macton's specialized systems provide a whole new spectrum of design and performance options. Macton works with your engineers, architects or designers throughout the process and can quickly adapt the size and shape of our systems to ensure that your objectives are met.

MACTON[®]

MACTON'S APPROACH TOWARD DESIGNING AND BUILDING FACTORY EQUIPMENT

From concept through completion, Macton serves as a professional member of the project team. Be it a single piece of equipment or a complex system, Macton works closely with the Owner's team to design an effective, economic solution.

Macton combines innovative applications engineering with a keen appreciation of the rigors of the industrial environment. Equipment that Macton has designed for the industrial market includes turntables, lifts, transporters, conveyor systems, and multiple axis motion machines. Applications have included paper mills, foundries, EMC/RFI test facilities, military installations, automotive assembly plants, aerospace facilities, and a broad spectrum of specialized applications.

Turntable-Based Positioning Systems

Macton has designed and delivered a variety of turntable-based positioning systems for diverse and demanding applications. Encompassing both indoor and outdoor applications, systems have ranged up to 60 feet in diameter and 100-ton capacities with positioning accuracies to thousandths of an inch. Each such system can be tailored to the specific needs of the customer.

Turntable-Based Indexing Systems

Macton indexing systems provide precise, repeatable, and dependable indexing of product, process stations, or work locations. Macton systems are required to operate in

some of the harshest industrial environments including; aluminum foundries, paper mills, railcar manufacturing shops, and automotive assembly plants. Engineered and built to last, these systems continue to provide dependable and precise indexing functions.

Aftermarket & Service – The installation of every Macton system is supervised by experienced Field Service Engineers to ensure that the system complies with customer's specifications and that installation time is optimized. These factory-trained Service Engineers, along with a fully staffed Spare Parts Department ensures years of on-going system support.
